WANT TO IMPROVE YOUR SECURITY STANCE?
NOT SURE WHERE TO START?

Most companies don't have the time or resources to commit to security enhancements and constant monitoring of IT systems for attacks and potential issues. Eliminate uncertainty and reduce risk with our Managed Security Starter Kit.
For one low fixed monthly cost, get access to all this and more:

SECURITY OPERATIONS CENTER (SOC)

Trust our team of security experts to deliver 24/7 protection for your systems and critical business data. Backed by sophisticated monitoring and analysis tools, our team of experts will alert you to any suspicious or malicious network activity. In addition, regular reporting will aid your decision making and increase the overall level of visibility into your environment.

01 SECURITY INFORMATION AND EVENT MANAGEMENT (SIEM)

Our SIEM collects, monitors, and assesses data from your critical business assets across multiple platforms in order to identify patterns and spot critical events as they occur in real time.

03 QUARTERLY VULNERABILITY ASSESSMENT

Most hackers access systems due to poorly patched or configured apps. With quarterly scheduled Assessments we will ensure software patches are up to date and you are safe from known security vulnerabilities.

02 FIREWALL MANAGEMENT

Ease the burden of dealing with your complex security devices on your own. IT Weapons will configure and manage your existing firewalls, ensuring proper protection and event logging is in place. Don't have a proper firewall or threat management solution? High-performance hardware-as-a-service devices are available.

04 ANNUAL PENETRATION TESTING

Checking the external facing IP addresses for vulnerabilities, and injection points for hackers are an essential part of keeping your IT environment secure. Annual testing will make sure that no new devices have been added, or forgotten devices are not providing a jumping point for hackers to invade your network.
