## IT SECURITY POSTURE REVIEW

# LET US HELP YOU ENHANCE THE SECURITY OF YOUR NETWORK

## HOW DOES IT WORK?

A Security Posture Review is much more than a technical review of your systems. Our security experts will sit down with your IT team to understand your environment and the technology you currently have in place.

Combined with a few non-intrusive technical reviews, our team will provide you with a detailed picture of your company's overall security posture, showing where you might be at risk...and how to fix it.

## WHAT DO YOU GET?

Based on NIST (Institute of Standards and Technology) cybersecurity framework, each Security Posture Review comes with a custom, detailed report that includes our findings, recommendations, a list of security gaps, and our overall score on the security of your environment.

You will also get to sit down one-on-one with our security experts to discuss the findings and the future of your security footprint.
